Are you shaping up?
Ability Based Seating™

Skills - Use them or loose them!
Concluding these newsletters we have not talked about tests, nor materials or quality. Instead we focused on the approach enabling users to be as active as possible within their ability and limitations. Striving to continuously support and improve the user’s ability is the basic idea for our products. Skills can diminish – use them or loose them! With Prio, we want to offer the best tools for the prescribers and rehab staff who are passionate about shaping up the position.

Together we create possibilities
Your experiences and feedback from working with Prio drives the development of new innovations moving forward. Together we can improve the user’s abilities and extend their sitting tolerance over time.
Shape is created on the spot
Prio always offers the possibility to shape and reshape the back support while the user is positioned in the wheelchair. We are convinced that this is the best solution. Over time the posture changes and requires new settings. And the users condition may also cause challenging demands on the wheelchair settings. We prioritize activity and sitting tolerance and we want to make it easy for prescribers, health professionals and family members to use all settings. All of us shall understand and know how to shape up the Prio user’s position.

Shaping up - a mindset
Our goal is making the step from using an medium-active wheelchair less dramatic. The user shall continue to be active, with the right mix of relaxation and adequate support. And we want you to use all the settings. Test and try to find the best solution for every Prio user. Both for activity and relaxation. Promoting activity is the foundation of Scandinavian rehab philosophy and is what we call: Ability Based Seating™.

With Prio it is easy to “Shape up”!

At etac.com you will find all the Prio information you need, including an instructional video showing the Etac Prio 3D back support in action!
