Immedia
Ensures safe and comfortable transfers
The Etac Group

With headquarters in Stockholm, Sweden, the Etac Group is a world-leading developer of ergonomic products that assist people living with restricted mobility. Our strength and competitive edge are delivered through a proven synergy of pioneering product design, excellence in service and a true understanding of end user needs.

Creating Possibilities

For more than forty years, the Etac Group has developed and manufactured products and services that create possibilities for users and carers. Today we offer a wide range of solutions for mobility with manual wheelchairs, advanced pressure care, innovative products for bathing and toileting, solutions for patient transfer and aids for daily living. We also provide a world-leading state of the art range of solutions for pediatric use.

Setting new standards

All our products have one thing in common – they are the best in terms of quality, simplicity, functionality, reliability and design that the market has to offer. Our products are developed in close cooperation with rehab professionals, industrial designers and users. This has resulted in ergonomic design and quality that are unique in the market. Every product detail is designed to ensure well-being and safety and aims to give the user comfort and functionality. A notable confirmation that we have succeeded are all the design awards we have received, both Scandinavian and international.

Innovation for the future

Our mission is that everyone should be able to live a free and independent life and pursue their dreams regardless of any physical circumstances. We will continue to innovate with Scandinavian quality and design and create possibilities for adults and children and their carers.

The Etac Group has subsidiaries in 8 countries and distributors in more than 45 countries spread over most of the globe, ensuring personal support.

Learn more about our products and improve your assessment skills! We provide product training, clinical applications and seminars related to our products. Our educational managers are product specialists with many years of clinical experience.
Welcome to Immedia
Manual Transfer Solutions

Immedia Manual Transfer product range ensures safe and comfortable transfers. The smooth products reduce friction and facilitate weight shifts. They also help encourage natural movement patterns and the transfer can be performed with ease and dignity for both the user and carer.

The Immedia Manual Transfer products are developed according to the principles that rely on the natural pattern of movement, weight transfer, knowledge about friction points and ethics. The idea behind the products is that they must be simple to use for both user and carer.

From problem solving to functional products
The story of Immedia started in the mid 1980’s when a Danish pioneer saw a need for manual transfer products after being hospitalized for a long period due to an accident. At the same time he was watching his elderly parents becoming more dependent on help from others. Facing these difficulties, he realised the problems surrounding manual transfers and came up with a vision to improve the quality of life for both users and carers.

Positioning – Horizontal

Systems and solutions for horizontal positioning, turning and moving higher up in bed.
Immedia SatinSheet System

A complete in-bed system for turning and positioning

Immedia SatinSheet System is designed to move a user in bed easier, whatever their ability. The In-bed system helps reducing strain on the carers back and therefore prevents work related injuries. Moreover, it helps to save time and may reduce the number of carers needed.

- Minimise the risk of pressure, since the SatinSheets reduce the risk of friction and hereby shear. Meet a wide range of needs from an independent to entirely dependent user.
- As the sheets stay in the bed, they enhance comfort for the user and facilitate to reposition, transfer or turn the user.
- SatinSheets can be placed on top of a pressure relieving mattress with no significant impact on the pressure qualities of the mattress.

Intended Use

- In-bed system, whether independent or assisted user
- Turning in bed
- Positioning in bed
- Moving higher up in bed
- Can be used in combination with a hoist

Tutorial

1. With the 4Direction, you can pull the user gently higher in bed with minimum effort. It’s easy to use the in-bed system since it stays in the bed.

2. Repositioning to the side in bed is done with one carer pulling and the other pushing.

Nice to know!

To avoid rotation of the back, ensure the same side of foot and hand are in forward position i.e. right hand, right leg, when pushing or pulling a user in the bed.

What makes up the SatinSheet System?

There are two main parts to the system, BaseSheet and DrawSheet.

BaseSheet sizes

For use on a standard single bed

- Mini
  - Slide area is from shoulders to knees or hips or lower legs only and is for use where the user is independent or partly independent. Commonly used for users with localised difficulty in movement.
  - If the user requires assistance with moving or turning, the BaseSheet should be used with a DrawSheet.

- Midi
  - Slide area is from head to knees or the lower half of the body and for use with partly dependent user with reduced mobility.
  - If the user requires assistance with moving or turning, the BaseSheet should be used with a DrawSheet 2Direction or 4Direction

For use on double beds

- Double
  - For wider double and king size beds. Suitable for a single user lying in the centre of a double bed or for a larger user on a bariatric bed.
  - Can be combined with Drawsheet 2Direction or 4Direction. Available in Mini, Midi and Maxi length.

- Maxi - Double offset
  - For wider double and king size beds. Used for a couple sharing a bed, where one person has difficulty turning or for an individual who prefers a double bed. The satin area is offset to one side. It can be used on its own or be combined with Drawsheet 2Direction or 4Direction.

DrawSheet 2Direction

Add the 2Direction DrawSheet for a partly dependent user who needs assistance with side to side movement. The DrawSheets are designed to be used on top of the BaseSheet. They do not work on their own.

DrawSheet 4Direction

Add the 4Direction DrawSheet for a dependent user who needs assistance moving in all directions. The DrawSheets are designed to be used on top of the BaseSheet. They do not work on their own.

Satins sizes

- Small: 60/65cm satin
- Standard: 70cm satin
- Wide: 85cm satin
- Double: 90/96cm satin

Watch our videos at www.etac.com

Learn more about how to use the SatinSheet System.
2Direction BaseSheet options

2Direction
A traditional sheet that can be tucked under the mattress. The user lies directly on the satin area which reduces friction between bedding and nightwear making moving and turning easier.

2Direction Corner
This sheet has elastic corner straps for fitting to the mattress. This is easy to fit for a single carer and works well with thicker mattresses or when a pressure relieving mattress is used.

2Direction Elastic Fit
This is a fitted sheet with elastic corner straps for fitting to the mattress. This is easy to fit for a single carer and works well with thicker mattresses or when a pressure relieving mattress is used.

DrawSheet options

DrawSheet 2Direction
This polyester/cotton sheet is used for side to side movement on the bed but will stop movement up and down so the user does not slide down in the bed.

DrawSheet 4Direction
This is a polyester/cotton sheet with a Satin back side which stays on the BaseSheet and allows movement up and down and side to side.

DrawSheet 4Direction w/handles
Suitable for single handed care. The handles can be combined with a hoist for turning. It is available in 2 sizes.

DrawSheet 4Direction w/wings
This is an incontinence pad with a satin back side which stays on the BaseSheet and allows movement up and down and side to side. Suitable for single handed care as the handles can be combined with a hoist for turning. It is available in 2 sizes.

Pillow Case
Are the stripes on the pillow from side/side the carer can easily move the user head from side/side without lifting, and the pillow cannot slide away. Turn the pillow 90 degrees and place under the shoulder and head the pillowcase can help to move up in bed.

In2Sheet 4Direction w/handles
This is an incontinence pad with a satin back side which stays on the BaseSheet and allows movement up and down and side to side. Suitable for single handed care as the handles can be combined with a hoist for turning. It is available in 2 sizes.

In2Sheet 4Direction w/wings
This is an incontinence pad with a satin back side which stays on the BaseSheet and allows movement up and down and side to side. Suitable for single handed care as the handles can be combined with a hoist for turning. It is available in 2 sizes.

Specifications

Fabric: 55% cotton / 45% polyester

Max. user weight: 200kg / 440lbs

Match by colour: Follow the colour coding to find the DrawSheets that match with the corresponding BaseSheet.
Immedia 4WayGlide System
In-bed system for users with limited mobility

The Immedia 4WayGlide System is an in-bed system for severely immobile users. It is ideal for users with reduced mobility or with pain or complex issues. The main advantage with this in-bed system is that it can remain in bed at all times. No application or removal of the slide sheets is necessary. Our 4WayGlide System always consists of two parts: a NylonSheet attached to the mattress and a 4WayGlide Mattress. The combination of the back side of the 4WayGlide Mattress and the NylonSheet provides a low friction surface for movement in all directions, which facilitates positioning and turning, whether manual or with support of a hoist.

Intended Use
- Turning
- Positioning
- Support horizontal transfer
- Can be used with support of a hoist

Tutorial
1. With the 4WayGlide, you can move the user gently higher in bed with minimum effort since it stays in the bed. The lock system gives the user the possibility to sit up in bed.
2. When the user has to be repositioned, unlock the Lock On Sheet System to enable low friction under the seat.
3. The 4WayGlide can now be used to reposition the user higher in bed.
4. Sideways repositioning is also easily done with one or two carers.

Nice to know!
Low friction material allows the upper body to slide when the head end of the bed is raised and thereby avoid shearing.

What makes up the 4WayGlide System?
There are two parts to this system, NylonSheet and GlideMattress.

4WayGlide NylonSheet
Start with a nylon sheet that is fitted directly to the bed mattress. The nylon sheet has a low friction sliding surface allowing the GlideMattress to slide easily on-top. The nylon sheet has elastic corner straps for fitting to the mattress.
- NS-sides: The nylon sheet can be equipped with non-slip high friction edges to minimise risk of sliding off the bed.
- NS-lock: The non-slip lock moves part of the sliding surface to expose a high friction area that locks in the position of the Glide Mattress. The nylon sheet can be equipped with 0 up to 3 non-slip locks. They do not work on their own.

4WayGlide Mattress
Add the 4WayGlide Mattress to assist moving in all directions. The Glide Mattress has handles on the back side providing a good grip for repositioning. And corner straps to place under the bed mattress to prevent the user to slide with the upper body in sitting positioning.

4WayGlide Mattress Sizes
For use on a single bed

Mini
4WayGlide mini is a short (100 cm) in-bed system suitable for users with slightly reduced mobility, for instance in the pelvic area. The system facilitates independent or assisted movement. The non-slip material along the sides of the nylon sheet minimises the risk of the user sliding out of bed.

Midi
4WayGlide midi is a short (150 cm) in-bed system suitable for heavy users with partly mobility in the legs. 4WayGlide midi has a non-slip lock between the nylon sheet and glide mattress and non-slip material along the sides of the nylon sheet.

LPL
4WayGlide LPL covers the full length of the bed. Comes with 2 different top sides - polyester/cotton or Polyurethane, and with handles placed either along the glide mattress on the length or the more traditional handles placed from side to side.

What makes up the 4WayGlide System?
There are two parts to this system, NylonSheet and GlideMattress.

4WayGlide NylonSheet
Start with a nylon sheet that is fitted directly to the bed mattress. The nylon sheet has a low friction sliding surface allowing the GlideMattress to slide easily on-top. The nylon sheet has elastic corner straps for fitting to the mattress.
- NS-sides: The nylon sheet can be equipped with non-slip high friction edges to minimise risk of sliding off the bed.
- NS-lock: The non-slip lock moves part of the sliding surface to expose a high friction area that locks in the position of the Glide Mattress. The nylon sheet can be equipped with 0 up to 3 non-slip locks. They do not work on their own.

4WayGlide Mattress
Add the 4WayGlide Mattress to assist moving in all directions. The Glide Mattress has handles on the back side providing a good grip for repositioning. And corner straps to place under the bed mattress to prevent the user to slide with the upper body in sitting positioning.

4WayGlide Mattress Sizes
For use on a single bed

Mini
4WayGlide mini is a short (100 cm) in-bed system suitable for users with slightly reduced mobility, for instance in the pelvic area. The system facilitates independent or assisted movement. The non-slip material along the sides of the nylon sheet minimises the risk of the user sliding out of bed.

Midi
4WayGlide midi is a short (150 cm) in-bed system suitable for heavy users with partly mobility in the legs. 4WayGlide midi has a non-slip lock between the nylon sheet and glide mattress and non-slip material along the sides of the nylon sheet.

LPL

Learn more about how to use the 4WayGlide System.
4WayGlide NylonSheet options

NylonSheet
With no lock and no non-slip along the side this is a nylon sheet, which can be used where there is no need to prevent the user to slide down or in/out of bed. Easier transfer from bed to bed.

NylonSheet - Non-Slip sides
With no locks but non-slip along the side this is a simple nylon sheet, which can be used where there is no need to prevent the user to slide down in bed. Available in three sizes for mini, midi or LPL.

NylonSheet w/lock
With one lock and no non-slip along the side this is a simple nylon sheet, which can be used where there is need to prevent the user to slide down in bed. Easier transfer from bed to bed.

NylonSheet w/lock. Non-Slip sides
With one lock and non-slip along the side this is a simple nylon sheet, which can be used where there is need to prevent the user to slide down and in/out of bed. Available in two widths.

4WayGlide Mattress options

4WayGlide Mattress - Polyester/ Cotton (mini, midi, LPL and maxi)
The Standard 4WayGlide Mattress has a polyester/cotton top side. Handles on the inside improve the grip and allow attachment to a hoist. Also available as 4WayGlide maxi which is an alternative for large and heavy users.

4WayGlide Mattress LPL + maxi - Polyurethane
The 4WayGlide Mattress has a Polyurethane top side. The surface is wipe-clean. Handles on the inside improve the grip and allow attachment to a hoist. Also available as 4WayGlide maxi which is an alternative for large and heavy users.

4WayGlide Mattress w/length handles - Polyester/ Cotton
The 4WayGlide Mattress has a polyester/cotton top side. This variant has handles following the mattress on the length. Handles on the inside improve the grip and allow attachment to a hoist.

4WayGlide Mattress w/lock, Non-Slip sides
With two locks and non-slip along the side this is a simple nylon sheet, which can be used where there is need to prevent the user to slide down and in/out of bed. There is no lock under the buttocks, this is to prevent shear and friction while the user is sitting in bed.

4WayGlide Mattress w/3x lock, Non-Slip sides
NylonSheet with three locks and non-slip along the side this is the most complex nylon sheet with seven different ways to lock the system. Can be used where there is need to prevent the user to slide down in/out of bed. Available in 2 widths.

Immedia TwinSheet4Glide

The in-bed solution for incontinent users

Immedia TwinSheet4Glide system

Immedia TwinSheet4Glide is a glide mattress suitable for turning and positioning of incontinent users with severely reduced mobility. Suitable also for users with dementia, or for those who feel unsafe, have brain damage, pain, pressure ulcers or are heavy. Immedia TwinSheet4Glide comes in two versions - full length and two parted. Disconnecting the lower part in this position provides better access for care of pressure ulcers, hygiene, dressing and even to change the bedding, both the lower part and the top part.

Intended Use
- Turning and positioning
- Provides support for users in the side position
- Personal hygiene, ulcer care and dressing
- Moving higher up in bed
- Horizontal transfer
- Can be used in combination with a hoist

Immedia TwinSheet4Glide options

Long
Immedia TwinSheet4Glide with a microfiber top side and an absorbent middle layer is perfect for users with incontinence. Long is full length. Handles on the inside improve the grip and allow attachment to a hoist.

Top & Down
Immedia TwinSheet4Glide comes also as 2-parted which is ideal to use in combination with a hoist. The user can be positioned on the side for ulcer care or personal hygiene. The bottom part can easily be removed and replaced if soiled. The product does not work on its own.

Immedia MultiGlide - Slide Sheets

Nylon slide sheets with low friction

Immedia MultiGlide is suitable when there is a need to minimise friction under the pressure points. For instance, when transfer tasks such as turning and repositioning in beds, operating tables or X-ray tables is performed. It is also suitable for transfers between bed and wheelchair.

Immedia MultiGlide is to be applied when necessary and always removed after use. The slide sheets are available in several sizes. Immedia MultiGlide has a loop strap for easy storage and colour codes for differentiation.

**Intended Use**

- Minimise friction under the pressure points
- Turning
- Positioning
- Higher up in bed
- Bed to bed transfer
- Dressing (MultiGlide SG)

**Immedia MultiGlide options**

**Immedia MultiGlide**
A thin tubular slide sheet high-low friction, low friction on the inside and high friction on the outside. The high friction outside ensures that it remains in place under the user during transfer and also provides a waterproof barrier.

**Immedia MultiGlide SG**
A slide sheet with low friction. Immedia MultiGlide SG is suitable for all types of situations when there is a necessity to minimise friction under pressure points. It has low friction both inside and outside with the double layer minimising friction.

**Immedia MultiGlide w/handles**
A tubular slide sheet with high-low friction, high friction on the outside and low friction inside. The handles are specifically designed to facilitate transfers up and down in bed, e.g. X-ray table or CT and MRI scanner.

**Immedia MultiGlide SG - Roll**
A nylon slide sheet with low-low friction MultiGlide SG roll that can be cut down to any desired length. Outside: low friction, inside: low friction. The roll size is 10 meters.

**Immedia MultiGlide SG - Roll**
A nylon slide sheet with low-low friction. Immedia MultiGlide SG is suitable for all types of situations when there is a necessity to minimise friction under pressure points. It has low friction both inside and outside with the double layer minimising friction.

**Specifications**

- **Immedia MultiGlide**: Nylon with silicone and Polyurethane coating.
- **Immedia MultiGlide SG**: Roll
- **Immedia MultiGlide w/handles**: Nylon with silicone and Polyurethane coating

**Immedia MultiGlide - Roll**
A nylon slide sheet with low-low friction. Immedia MultiGlide SG roll that can be cut down to any desired length. Outside: low friction, inside: low friction. The roll size is 10 meters.

**Immedia MultiGlide w/handles**
A tubular slide sheet with high-low friction, high friction on the outside and low friction inside. The handles are specifically designed to facilitate transfers up and down in bed, e.g. X-ray table or CT and MRI scanner.

**Immedia MultiGlide SG**
A slide sheet with low friction. Immedia MultiGlide SG is suitable for all types of situations when there is a necessity to minimise friction under pressure points. It has low friction both inside and outside with the double layer minimising friction.

**Watch our videos at www.etac.com**
Learn more about how to use the Immedia MultiGlide.
Immedia MultiGlide Single Patient Use

Disposable sliding sheet with low-low friction

Immedia MultiGlide Single Patient Use (SPU) is a user specific (disposable) slide sheet. The product can be used for transfer tasks such as turning and repositioning in bed or on an operating table. It is also suitable for transfers between bed and wheelchair.

The thin sliding sheet reduces friction under pressure points which minimises the shear forces on the user considerably, and decreases the workload on the carer.

Intended Use

- Disposable
- Single Patient Use
- Can be used in a department with high user “turnover” or high cross contamination risk
- Unique solution for all transfer or repositioning situations
- Reduces the infection risk
- Can be used repeatedly with the same user

Watch our videos at www.etac.com
Learn more about how to use the MultiGlide SPU.

The Immedia MultiGlide Single Patient Use is designed to meet the needs and challenges of healthcare facilities in areas with high user turnover and high demands of infection control. It is available in two options: tubular or open.

No handling of laundry and less storage capacity is needed. The box does not require much space, so it can be placed within short reach in a department, in an examination room, in an X-ray room or in an ambulance.

The Immedia MultiGlide SPU slide sheet must be discarded if soiled, or it is no longer in use by the specific user.

Accessory

Wall Dispenser
The Wall Dispenser can be mounted on the wall and the box can easily be placed in it.

The Wall Dispenser can be mounted on the wall and the box can easily be placed in it.

www.etac.com
Immedia In2Sheet

Absorbing pad with satin

In2Sheet is an absorbing pad with a low friction back side. It is used directly on top of a cotton bed sheet, with the satin low friction back side down. This reduces friction side-to-side and is therefore suitable for turning an incontinent user with reduced mobility. In2Sheet has handles along the sides for a better grip.

Immedia In2Sheet low friction back side facilitates turning in bed.

Immedia GlideCushion

Padded GlideCushion

Immedia GlideCushion is used for turning in bed, moving up or down a bed and transfer from bed to wheelchair. Immedia GlideCushion can be used to support independent movement or to support assisted movement. The glide cushion is available in two models; Immedia GlideCushion nylon top side or Immedia GlideCushion polyester/cotton top side, which can be combined with a nylon cover.

Accessories

- Nylon Cover
  Immedia GlideCushion can be combined with waterproof nylon cover.

Immedia TurningMattress

Padded TurningMattress

Immedia TurningMattress is suitable for turning in bed. It is placed in bed and the user remains on top of it. The low friction inside may facilitate a user with reduced mobility to turn independently in bed. If necessary, one or two carers may assist the turning.

Immedia Swivel Cushions
For turning in sitting position

Immedia Swivel Cushions are specifically suitable to support turning in and out of a car, bed or chair.

Immedia AutoTurn
The Immedia AutoTurn facilitates getting in and out of a car. Its low friction allows the user to slide and turn into the desired position in the car seat. This minimises strain and twisting of feet, knees, hips and back. Immedia AutoTurn is fixed around the car seat with a belt and buckle. Handles at the sides can be used to assist the user into place.

Immedia EasyTurn
Immedia EasyTurn is a soft swivel cushion that makes it easier for the user to get in and out of a car or bed. Immedia EasyTurn is easy to apply and use.

Positioning – Sitting
Solutions for positioning when sitting.
Immedia OneWayGlide

For controlled and easy positioning

Immedia OneWayGlide is a cushion that allows sliding easily in one direction whilst resisting sliding in the other direction. It is suitable for users that slides forward when sitting. The cushion facilitates independent or assisted positioning back in the chair whilst helping to prevent the user from sliding forward.

The cushion is available in the following versions: Immedia OneWayGlide Non-Slip, Immedia OneWayGlide Velour, tubular, long and as a pad.

### Intended Use
- Positioning back in chair / wheelchair / day chair

### Tutorial

1. Using the Immedia OneWayGlide eases repositioning when the user slides forward in the wheelchair.

2. To move backwards in the wheelchair the user must lean forward, hold the armrest and push towards the backrest using her arms and, if possible, legs.

3. When the user is upright again, the unique design of the Immedia OneWayGlide will prevent the user from sliding out of the chair.

### Place the Immedia OneWayGlide in the chair just in front of the seat.

Nice to know!

If a user slides forward, it may be due to a poorly adapted wheelchair. Always assess the seat before using Immedia OneWayGlide.

Immedia OneWayGlide options

- **Immedia OneWayGlide Non-Slip**
  - Immedia OneWayGlide Non-Slip is a tubular cushion with a Non-Slip outer material that grips to any surface. It can be combined with a Polyurethane cover when necessary.

- **Immedia OneWayGlide Velour Pad**
  - Immedia OneWayGlide Pad is a one-layer pad with velour top side suitable for use directly on a textile surface.

- **Immedia OneWayGlide Velour**
  - Immedia OneWayGlide velour is a tubular cushion with velour top side. More comfortable to sit on, but needs to be used on a textile surface.

- **Immedia OneWayGlide Long Velour**
  - Immedia OneWayGlide Long Velour is a long and open cushion with handles and velour top side. The length allows for repositioning to be done several times in one application. The handles provide a good grip, allowing the carer to assist.

- **Immedia OneWayGlide Long w/straps Velour**
  - This is a long and open cushion with handles and velour top side. The length allows for repositioning to be done several times in one application. The straps are used to tie the cushion to the wheelchair frame when necessary.

### Immedia OneWayGlide specifications

Immedia PediTurn
Swivel Cushion for the floor

Immedia PediTurn is a swivel cushion that facilitates transfer between sitting positions, such as bed to wheelchair. It is used when the user cannot move their feet during the transfer.

Options

- **Immedia PediTurn Soft:**
a soft cushion suitable when the user is not wearing shoes. It has a non-slip surface on both sides to avoid sliding out of position.

- **Immedia PediTurn Hard:**
a hard plate suitable when the user is wearing shoes.

**Intended Use**
Supports moving feet during seated transfer like:
- Transfer between bed and wheelchair
- Transfer between wheelchair, chair, shower chair, toilet, commode
- Transfer in and out of a car

**Specifications**

**Intended Use**

- Transfer between bed and wheelchair
- Transfer between wheelchair, chair, shower chair, toilet, commode
- Transfer in and out of a car

**Product Details**

- **Max user weight:** 150kg / 330lbs
- **Material:** ABS/TPU, Nylon, Toughtek
- **Fixing:** Brass/steel
- **Top side:** Toughtek
- **Inside:** Nylon, Hard Plastic (HDPE)

---

Transfer – Sitting
Solutions for seated transfers between bed, wheelchair, chair, toilet, etc.
Immedia Transfer Boards

A wide range of solutions for seated transfers

The transfer board is intended to bridge shorter gaps when performing seated transfers. The board’s low friction on the top side allows the user to transfer independently or with assistance. Transfer boards are used when transferring between bed and wheelchair / shower chair, between wheelchair / chair / toilet chair or to and from the car. All boards have a non-slip area on the back side. Combining a Transfer Board with Immedia GlideCushion or Immedia GlidePad/MultiGlide provides even lower friction and is recommended when the transfer involves bare skin, for instance to and from a shower chair or toilet.

**Intended Use**

- Transfer from bed to wheelchair / shower chair
- Transfer in and out of the car
- Transfer between wheelchair, chair, toilet, shower chair, commode

**Tutorial**

1. Place the Immedia Butterfly Board close to the user’s seat, and slide the GlideWing under one seat bone.
2. If possible, the user holds on to the opposite armrest when she starts to slide towards the wheelchair. Use the Immedia PediTurn to ease turning.
3. When the transfer is complete, remove the Immedia Butterfly Board and engage wheelchair armrests and footrests.

**Usage Tips**

Watching our videos at www.etac.com

Learn more about how to use the Transfer Boards.

---

**Immedia Butterfly Board**

Immedia Butterfly Board is a long, wide and stable transfer board. It has cut outs for positioning against the wheel of a wheelchair and non-slip pads on the back side which allows for good positioning and avoids sliding out of place.

**Immedia 3B - Board**

Immedia 3B - Board is a stable transfer board with a traditional curved shape. The board can be placed either curve forward or curve backward depending on the transfer situation and surrounding obstacles, e.g. the wheel of the wheelchair.

Immedia 3B - Board’s length allows transfer across wider gaps.

**Immedia Butterfly GlideWing**

Immedia Butterfly Board can be used with the special Immedia Butterfly GlideWing, which is mounted on the board. The GlideWing slides along the board and provides additional slide function.

**Immedia Dolphin Toilet Board**

Immedia Dolphin is a sturdy and stable transfer board uniquely designed for transfer to the toilet or toilet chair. The Toilet Board has cut-outs for positioning against the wheel of the wheelchair and non-slip pads, which allows good positioning and avoids sliding out of place. The cut-out allows the user to remain on the board while sitting on the toilet.

Immedia Glide Pads
Glide Pads for easy transfer

Immedia Glide Pads can be used alone or in combination with Immedia GlideBoards for positioning/repositioning or transfer. The handles give the carer a good grip when transferring.

Immedia Swan
The Immedia Swan is an open glide pad with handles. It is suitable for transfer between bed and wheelchair or in and out of a car and can be used independently or in combination with a transfer board.

Immedia HandyTrans
Immedia HandyTrans is a short glide pad suitable for transfer between bed and wheelchair or for adjusting position in bed. It can be used independently or in combination with a transfer board. The optimal solution for a seated transfer in and out of car, is a combination of a transfer board and an Immedia HandyTrans.

Immedia HandyTrans gives the carer a good grip when transferring on a transfer board.

Transfer – Horizontal
Solutions for horizontal transfers between beds, bed to shower trolley, etc.
Immedia 2Move Transfer Board

Transfer Board for horizontal transfer

The transfer board Immedia 2Move is used to bridge the gap between two horizontal surfaces and alters the height difference if needed. The transfer board is used for horizontal transfer between beds, bed to shower trolley, bed to X-ray table, stretcher to bed, etc. Immedia 2Move is easy to transport and store due to its low weight of only 1.5 kg and since it is foldable. The handles facilitate carrying and make it easy to hang up the transfer board.

Intended Use
- Bridges the gap when transferring between two supine positions
- Transfer between beds
- Transfer between bed and shower trolley
- Transfer between bed and stretcher, X-ray table, operating table

Tutorial
1. Place the Immedia 2Move halfway under the user’s body. Place the user’s head and feet on the Immedia 2Move.

2. Place the two horizontal surfaces close to each other. One carer lifts and pushes the user towards the Immedia 2Move. A second carer pulls the user towards the stretcher.

3. When the transfer is complete, remove the Immedia 2Move Transfer Board.

Comfortable transfers
The foam material is comfortable for the user to be transferred on and the surface is easy to clean and disinfect according to general standards.

Immedia 2Move is always used in combination with a low friction cover (accessory) which slides around the board, minimising friction and facilitating the transfer.

Nice to know!
Use a sheet or a drawsheet between the Immedia 2Move and the user to reduce shear and create handles.

Watch our videos at www.etac.com
Learn more about how to use the Transfer Boards.

2Move options

Immedia 2Move Large foldable
Immedia 2Move Large foldable can be used for all horizontal transfers and is easy to transport and store.

Immedia 2Move Small
Immedia 2Move Small can be used when the user is partly dependent with either upper or lower body weakness.

Immedia 2Move X-Large foldable
X-Large foldable is a wider option to the large transfer board and can be used for either wider transfers or for large or heavy users.

Immedia 2Move Large non-foldable
2Move large non-foldable is similar to the Large foldable, but is rigid and cannot be folded.

Accessories

Immedia 2Move Nylon Cover
Immedia 2Move Nylon Cover is a low friction cover which slides around the board. It minimises friction and facilitates the transfer. Three cover sizes are available. Material: Nylon, waterproof.

Immedia 2Move Disposable Cover
Material: PE-LD

Immedia 2Move Display
The wall display assures the accessibility of the transfer board and has a dispenser for the disposable cover.

**Immedia TransferMattress**

Soft padded mattress for horizontal transfer

Immedia TransferMattress facilitates horizontal transfer between two supine positions, such as bed to bed, bed to shower trolley, bed to X-ray table, etc. It can also be used for turning in bed, for instance from “face up” to “face down”. Immedia TransferMattress is made of a soft padded polyester/cotton material and available in two widths, 60 cm and 70 cm.

**Intended Use**
- Transfer between beds
- Transfer between bed and shower trolley
- Transfer between bed and stretcher, X-ray table, operating table
- Turning in bed

**Combined with a cover**
Immedia TransferMattress can be combined with a waterproof nylon cover or a disposable cover. TransferMattress should not be used if there is a gap between the two transfer surfaces.

**Accessories**

Nylon Cover
Immedia TransferMattress can be combined with a waterproof Nylon Cover.

Support
Solutions for support, mobilisation and transfer.
**Immedia SupportBelt**

*Support Belt with handles*

Immedia SupportBelt is used to offer support and assistance during mobilization and transfers. The diagonally placed handles allow the carer to maintain a more ergonomic grip.

Immedia SupportBelt is a useful aid when helping a person to stand up or sit down, to support walking or to assist during transfer between bed, wheelchair, chair, etc. The Immedia SupportBelt has non-slip material on the inside and an adjustable belt buckle.

**Intended Use**
- Support stand up / sit down
- Support walking training
- Support transfer between bed, wheelchair, chair, etc
- Transfer from wheelchair to toilet

- Belt buckle: Acetal
- Max user weight: 150kg / 330lbs

---

**Immedia Sling**

*Multifunctional transfer aid*

The Immedia Sling is a multifunctional transfer aid that can be used in several situations.

Immedia Sling with handles acts as an extension of the arms, allowing the carer to offer support and assistance whilst maintaining a good ergonomic position and grip, without encroaching on the user’s personal space.

**Intended Use**
- Support moving higher up in bed
- Support transfer between bed, wheelchair, chair, etc
- Support stand up / sit down
- Moving back / forward in chair / wheelchair

**Tutorial**

1. The Sling provides excellent handles for carers. Used with MultiGlide or similar low friction devices, you ensure a safe working environment when users need to be repositioned in bed.
2. Even with one carer, it is possible to reposition the user higher in bed using the Sling as shown.
3. With one or two carers, a user can be repositioned further back in a chair by moving the user slightly from side to side.

---

**Nice to know!**

When two carers are working together one should always give a precise command when to push or pull.
Immedia SmartMove
Support pad with handles

Immedia SmartMove acts as an extension of the arms, allowing the carer to offer support and assistance whilst maintaining a good ergonomic position and grip.

Immedia SmartMove pad can be used to support and help transfer from sitting to standing, standing to sitting, to move higher up in bed or move back/forward in a chair. Immedia SmartMove provides the carer with a place to grip and to maintain a good working position. The inside has a non-slip material to help prevent sliding out of position during the transfer, whilst the outside has a low friction side to aid application and removal.

Immedia BedString
Supports sitting up and repositioning in bed and chair

Immedia BedString with handles is mainly intended for the active user to support moving to a sitting position in bed. In the sitting position, the user may use it to lean themselves forward to allow easier application of a sling, positioning of pillows or for dressing. Immedia BedString has 8 handles, alternating right and left side of the string to enable the user to find a good grip.

Special Solutions
Solutions for support, mobilisation and transfer.
Immedia SlingOn

A transfer aid for positioning and application of lifting sling

Immedia SlingOn is primarily designed for easy application of a lifting sling in bed without the need for logrolling or moving the user. Immedia SlingOn consists of two separate ultra-low friction nylon slide sheets held together by snap buttons in the corners and it has handles along the sides. Immedia SlingOn is an ideal aid for users that needs frequent lifting, heavy users, or users that should not be log rolled for application of a sling. In addition, it can be used for all positioning in bed.

Intended Use

- Application of a lifting sling without rolling
- Minimise friction under pressure points
- Turning
- Positioning
- Move higher up in bed

Tutorial

1. Roll up the Immedia SlingOn from the short side in 20-30 cm steps. Roll out the Immedia SlingOn underneath the user in stages. It is important to pull the Immedia SlingOn simultaneously.

2. When the Immedia SlingOn is in place, apply the lifting sling between the two layers of the Immedia SlingOn. The lifting sling is applied in the same way as the Immedia SlingOn. Pull from the head end towards the seat in small steps. When the lifting sling is in place, remove the top part of the Immedia SlingOn. The user can now be lifted.

When working with bariatric users and narrow surfaces, logrolling users can be challenging. The Immedia SlingOn allows you apply lifting slings without logrolling the user.

Nice to know!

Use the Immedia SlingOn as traditional slide sheets. The two parts are equipped with handles to make repositioning easy. The Immedia SlingOn can also be applied from knee level and towards the head end.

Specifications

- Material: Nylon
- Strap: Polyester
- Press buttons
- Max user weight: 300kg / 660lbs

Immedia WiseMover
In-bed positioning

Immedia WiseMover is a specially developed in-bed solution for bedridden users that require frequent positioning and transfer, for instance users in an ICU environment. Immedia WiseMover stays fixed to the bed; the slide sheets are folded away in the case at the head end and are folded in and out under the user when required.

When rolled out under the user it can be used for turning, positioning and horizontal transfer. It also facilitates inserting an X-ray cassette when the user needs to stay in bed.

Immedia MiniBoard
Soft transfer stretcher

Immedia MiniBoard is suitable for transfer between bed and operating table, turning and positioning in bed. The plate inside in combination with the low friction material makes it easier to insert under the user.

There are two options with head support which allow safe and comfortable support for the head during transfer.

---

### Immedia WiseMover

**Intended Use**
- Minimise friction under the pressure points
- Turning
- Positioning
- Horizontal transfer
- Inserting X-ray cassette
- Inserting lifting sling

Immedia OneManSling
The single carer’s companion

Immedia OneManSling makes it possible for one carer to move a user higher up in bed. Fasten the Immedia OneManSling using the loop at one side of the head end of the bed and by using the leverage created by the sling and the slide cushion, using minimal effort, move the user higher up in bed. To minimise friction, place a slide sheet under the user’s pressure points, primarily shoulders and hip section.

The construction of Immedia OneManSling, with a strap and a slide cushion, together with an Immedia MultiGlide, gives very good leverage for effortless movement.

### Intended Use
- Assisted move higher up in bed
- Assisted move legs in and out of bed

### Specifications
- Sling: Polyester
- Padding: Polyester
- Glide cushion inside: Nylon
- Outside: Polyurethane
- Max user weight: 150kg / 330lbs

### Accessories
- **Cover**
  - Nylon cover with Polyurethane-coating.

---

Immedia Positioning Wedge
Support and positioning wedge with non-slip material

Positioning Wedge supports the user on the side after turning, when resting or when performing hygiene or ulcer care, saving the carer from maintaining a static holding position. The Positioning Wedge can be combined with 4WayGlide System, SatinSheet System, MultiGlide or other slide sheets. The cover is a non-slip material that helps to keep the Positioning Wedge in place independent of surface material.

The Positioning Wedge have unequally angled sides, turn the Positioning Wedge around and use the angle that fits best for the situation.

### Intended Use
- Support static positioning
- Resting
- Care and personal hygiene
- Can be used alone or in combination with other positioning aids

### Specifications
- Immedia Positioning Wedge
  - Material: Soft foam
  - Cover: Nylon, zipper
  - Max user weight: 200kg / 440lbs

Immedia MultiGlide Glove

Multifunctional aid for small transfers

Immedia MultiGlide Glove can be used in many different manual handling situations. The glove makes it easier to place the hands between the user and mattress or cushion. Small re-positioning adjustments, movements and smoothing out the bed sheets or clothes are common activities for which the gloves are very useful, and will provide an improved solution for the user and the carer. Immedia MultiGlide Glove can also be used for skin tension release.

**Intended Use**

- Positioning
- Small re-positioning adjustments
- Hand check of anti-decubitus cushions and mattresses
- Skin tension release

Immedia X-Ray Solutions

To ease the X-ray process for bedridden users

**Immedia Thorax Slide Secure**

Immedia Thorax Slide Secure facilitates the insertion of an X-ray cassette under a bedridden user. It is fixed to the head end of the bed so that it is easily available. Immedia Thorax Slide Secure has been developed for bedridden users that need frequent X-ray examinations.

**Immedia Scanner ArmSupport**

Immedia Scanner ArmSupport is a tool for users who have difficulties in placing and holding their arms in position during X-ray and scanning. Immedia Scanner ArmSupport makes it more comfortable for the user and minimises risk of movement during the X-ray or scanning to give improved picture quality.

**Accessories**

- **Immedia Thorax Slide Secure Bag**
  - Immedia Thorax Slide Secure can be combined with Immedia Thorax Slide Secure for even easier application of the X-ray cassette.

**Immedia MultiGlide Glove**

Multifunctional aid for small transfers

- Can be used in many different manual handling situations
- Easy to use for placing hands between user and mattress or cushion
- Useful for small re-positioning adjustments, movements, and smoothing out bed sheets or clothes
- Can also be used for skin tension release

**Intended Use**

- Positioning
- Small re-positioning adjustments
- Hand check of anti-decubitus cushions and mattresses
- Skin tension release

Immedia RescueSheet

Emergency evacuation slide system

Immedia RescueSheet is an evacuation sheet that remains in place under the mattress. In case of emergency, it can be used to quickly transfer a bedridden user including the entire mattress out of the room and down the stairs. The material is fireproof.

Intended Use
- Emergency evacuations
- Transfer out of bed, and slide out to safety

Immedia HipTurner

Special aid for turning and static support in bed

HipTurner is especially designed for turning a user and supporting them in a static position on one side, while also creating space for placing a bed pan under the user, for personal hygiene, ulcer care or dressing. HipTurner makes it possible for the carer to maintain a good working position thus minimising strain.

Turning with help of HipTurner can be performed manually or in combination with a hoist.

Intended Use
- Turning in bed
- Support static positioning on one side
- Facilitate placing bed pan, personal hygiene, pressure ulcer care or dressing
- Can be used in combination with a hoist

Immedia Non-Slip

When increased friction is required

Immedia Non-Slip Square

A high friction pad that can be used when increased friction is desired. It can for instance be placed under the feet to stay and support the user when moving themselves higher up in bed.

Immedia CloverFoot

Stool for elevating position of feet

Immedia CloverFoot is a stool used to elevate the user’s feet during transfer, for instance when the bed, wheelchair or other seat cannot be adjusted in height. Immedia CloverFoot can also be used to elevate and support the user’s feet during toileting and to give a more stable and comfortable position.

Immedia CloverFoot has an angled shape front and back so that it can be placed close to any obstacle and to provide the carer with more space to maintain a better working position.

Specifications
- Immedia CloverFoot: Plastazote
- Max user weight: 150kg / 330lbs

Immedia Non-Slip Roll

A high friction material on a roll that can be cut to the desired size. Rolls are 150 cm wide and available in two lengths; 5 meters or 30 meters.
Sit to Stand
Solutions for active sit to stand transfers.
Molift Raiser
Transfer platform for active transfer

Molift Raiser is designed to safely activate the user whilst maintaining the best possible ergonomic moving and handling conditions for the carer. The unique leg support is designed to be easily adjusted with one hand. Similarly, wheel locks (right or left) will lock both wheels simultaneously providing a safe braking solution in space limited environments. The fine grain finish of the foot-plate provides a non-slip surface and the handle offers many different grip possibilities. If the user has difficulties grasping the handle, the soft handle can be used to help the user reach all the way.

Intended Use
- Sit to stand transfer platform
- Transfer bed to wheelchair / shower chair
- Transfer wheelchair to toilet
- Moving back / forward in wheelchair
- Transfer chair to wheelchair / shower chair

Accessories

Molift Raiser Strap
A safety strap can provide support around the back or hips when standing up.

Molift Raiser Strap+
When users need to be assisted this can be done by one or two carers using the Molift Raiser Strap+.

Raiser Belt
The Raiser Belt provides additional standing support. The belt can easily be placed around the buttocks or the waist depending on what best suits the user and the situation.

Etac Turner PRO
User turning with standing support

Etac Turner PRO is a turn aid with a functional design that offers safe user turning with standing support. This turn aid enables a good posture and minimises the risk of injury for the carer when transferring. Moreover, it encourages natural standing and sitting movement for the user. The only adjustment necessary is the height of the leg support and the handle. Thereafter, the transfer can be performed safely whilst the small footprint makes it the perfect choice of transfer aid when transferring in tight spaces. Etac Turner PRO is easy to transport due to its low weight of only 7.5 kg, furthermore it is compact and easy to grip.

Intended Use
- Sit to stand transfer platform
- Transfer bed to wheelchair / shower chair
- Transfer wheelchair to toilet
- Transfer chair to wheelchair / shower chair
- User turning on the spot

Description H Item no.
Etac Turner PRO
Etac Turner PRO 90 / 109 160004

Specifications
- Material: Cast aluminium, powder coated steel, tPR
- Lower leg support height: 15 cm
- Lower leg support width: 38 cm
- Max user weight: 150 kg
- Total height: 87 cm

Features

Contrasting coloured handle
The orange handle provides a strong, high contrasting colour which can help users with impaired vision or dementia.

Compact
Easy to transport. Easy to grip. Light, evenly balanced weight.

Angled leg support
Soft and comfortable, provides lateral support. Easy to adjust to whatever height is needed.
Service information & procedures for delivery and inspection

Thank you for choosing an Etac product. If the customer makes adjustments, repairs or combinations not predetermined by Etac, the Etac CE certification and Etac warranty will not be valid. Warranty: Two-year warranty on material and manufacturing defects, provided that the product is used correctly. Before taking a product into service always conduct a risk assessment according to national and/or local legislation.

First Inspection
- Is the packaging intact?
- Read the label on the packaging and check the article no. and product description
- Check that Short Instruction is enclosed – updated User Manual can be downloaded from www.etac.com or contact the local distributor.
- Check the label on the product – does it include article no., product description, lot/batch no., cleaning instructions and supplier name?

Visual inspection/Check the product
Ensure that the materials, seams, stitching, handles, buckles are intact/faultless.

Mechanical load or stress/Test handles
Pull hard in the handles in opposite directions and inspect the material, seams and stitching.

Test buckles
Lock the buckle and pull in opposite directions, inspect the buckle and the stitching.

Periodic Inspection
- Make sure that your Manual Transfer system always is in a perfect condition.
- After wash – always check materials, stitching, handles, buckles.
- If the product shows signs of wear and tear, it must be removed from service immediately.
- Lot no/Batch no:

Stability test
Try to bend the product and verify that it feels firm, stable and solid.

Test low & high friction
Place the product on a firm surface or a bed, place your hands on the material and test the friction by pushing your hands down into the material.
- Low friction – slides effortlessly
- High friction – no sliding/moving
