

Ankle straps

When considering using vests and belts for a child, it is important to choose the correct size in order to ensure the correct positioning and fit. When measuring the child, the measurements should be taken with a flexible tape measure in order to follow the curves of the body.

Limits movement of the feet and legs, preventing unwanted movements due to impairments in muscle tone or movement functions.

For the ankle straps the measurement is taken at the circumference (C) of the ankle just above the malleolus.

	XS	M	XL
Circumference (C)	6¼"–9"	9"–12¼"	11½"–15"
